Agents & Task Management System — Role-Based Task Distribution Platform

[Live Demo](#) | [GitHub Link](#)

Tech Stack: MERN Stack, TypeScript, Tailwind CSS, JWT, MongoDB

- Built a full-stack role-based task distribution platform using **MERN** stack and **TypeScript**, reducing manual allocation effort by **80%+**.
- Developed automated task assignment system with **CSV/XLSX** uploads and **round-robin** distribution logic with reassignment handling.
- Implemented secure **REST APIs**, **authentication**, **validation**, **rate limiting**, **sanitization**, and responsive dashboard features.

PROJECTS

Angelic — AI Fashion Recommendation System

[Live Demo](#) | [GitHub Link](#)

Tech Stack: React.js, Node.js, Express.js, FastAPI, MongoDB, Python, OpenCV, AWS S3, Socket.IO

- Built an **AI-powered** fashion recommendation platform using facial landmark detection and machine learning to provide personalized outfit and seasonal color suggestions.
- Designed a **microservice-based architecture** integrating **React**, **Node.js**, and **FastAPI** for real-time image analysis and scalable backend processing.
- Optimized image upload pipeline using **AWS S3 signed URLs** and image compression, reducing upload payload size by up to **70%** and improving upload speed and user experience.
- Integrated **real-time notifications** and an **AI fashion chatbot** to deliver interactive styling guidance based on user skin tone and face shape.

AI Article Scraper & Rewriter

[Live Demo](#) | [GitHub Link](#)

Tech Stack: Node.js, Express, MongoDB, Cheerio, Serper API, LLM

- Built a system to scrape, store, and rewrite articles using **LLMs** and **Google Search APIs**.
- Developed **REST APIs** and dashboard for managing scraped content and **AI-generated** article versions.
